mithrabalraj25@gmail.com | +91 7603801166 | linkedin.com/in/mithra-balraj-59ab97325 | github.com/Mithss05

SUMMARY

Software developer with full-stack experience across Python, Flask, JavaScript and React Native, backed by internships where I built and shipped working products. I have delivered two machine learning-driven healthcare applications using CNN and ONNX models and launched a production WordPress site with SEO optimisation. I enjoy turning real problems into reliable, well-structured software, and I am looking to grow in a collaborative engineering team.

EDUCATION

M.Sc. in Software Systems — Cum. GPA: 7.7 (Till Sem VII)
Sri Krishna Arts and Science College, Coimbatore, Tamil Nadu

HSC - Computer Science — 2020 - 2022
BVB Matric Hr. Sec. School | 86%

SSLC — 2019 - 2020
RVS Matric Hr. Sec. School | 80%

SKILLS

Programming: Python, JavaScript, PHP, SQL
Web & Frameworks: HTML & CSS, Flask, WordPress, React Native
Tools & Platforms: Linux, Figma, Power BI, Excel, Firebase, MySQL
Coursework: Machine Learning & Deep Learning, Database Management Systems, Web Technologies, Computer Networks & Security, Software Engineering
Certifications: Google GEN AI (Google), Soft Skills Development (NPTEL), Frontend Development (Great Learning), Network Security (Great Learning)

EXPERIENCE

HANSOFT TECHNOLOGIES | Full Stack Developer Intern — Jun 2025 - Oct 2025 | Coimbatore

- Engineered a full-stack pneumonia detection system that analyzes chest X-ray images and predicts respiratory infection categories.
- Developed a CNN-based deep learning pipeline in Python and integrated it with a Flask backend for image preprocessing, inference, and result generation.
- Implemented a scalable web interface using HTML, CSS, and MySQL, enabling classification into Normal, Bacterial Pneumonia, and Viral Pneumonia.

LB ELITE TRAVELS | Web Development & SEO Intern — Oct 2025 - Dec 2025 | Bangalore (Remote)

- Developed and deployed the official company website using WordPress, improving the organization's digital presence.
- Customized themes, configured plugins, and executed on-page SEO optimization and SEO audit strategies.
- Improved site structure and search visibility through keyword optimization, metadata improvements, and performance enhancements.

VIRTUAL INTERNSHIP

DELOITTE | Technology Virtual Experience - Forage — March 2026

- Developed Python-based data transformation logic to standardize heterogeneous IIoT machine telemetry data.
- Designed a scalable real-time manufacturing dashboard architecture with authentication and alerting mechanisms.
- Delivered a structured system proposal outlining improved data integration, monitoring efficiency, and scalability.

PROJECTS

AUTISM DETECTION MOBILE APPLICATION — React Native | Python | ONNX | Flask | Firebase | Cloudinary

- Designed and developed a mobile-based autism screening application combining facial image analysis with symptom-based evaluation.
- Integrated ONNX machine learning models with a Flask API to perform real-time inference on captured or uploaded images.
- Implemented secure data storage and seamless backend communication using Firebase and Cloudinary, enabling real-time prediction visualization.

PNEUMONIA DETECTION SYSTEM — Python | CNN | Flask | OpenCV | HTML | CSS | MySQL

- Built an AI-powered medical image classification system to detect pneumonia from chest X-ray images.
- Implemented a Convolutional Neural Network (CNN) model using Python and integrated it into a Flask-based web application for prediction.
- Developed an interactive interface enabling users to upload images and receive automated classification results across three diagnostic categories.
